CERTIFICATE & ACKNOWLEDGEMENT

This is to certify that the project titled "School Admission Portal" is the original work of Muhammad Ibnu Fauzi and Rafa Raihan, completed as part of their course requirements under the guidance of Mr. Listyo Edi Prabowo at NIIT.

We would like to express our sincere gratitude to God for His blessings, and to Mr. Listyo Edi Prabowo for his continuous support and guidance throughout the development of this project. We also thank everyone who encouraged and motivated us during this process.

Although we have done our best, we realize that this project is not perfect. We welcome constructive feedback and sincerely apologize for any errors or shortcomings in this work.

SYSTEM ANALYSIS - SUMMARY

The School Admission Portal is a web-based system developed using PHP and MySQL to simplify and digitize the student admission process. It allows students to register online, upload necessary documents such as certificates, report cards, ID photos, and family cards, as well as track their admission status.

Students can communicate with administrators through an internal messaging system and receive updates regarding their application progress. On the other side, administrators are able to verify student documents, manage exam permissions, evaluate exam results, and update admission statuses – all in one centralized system.

This platform reduces paperwork, minimizes human errors, and ensures a faster, more transparent admission process.

SYSTEM ANALYSIS - BENEFITS

The School Admission Portal offers several key benefits that improve the traditional admission process: It significantly saves time and reduces administrative costs by digitizing registration and document management. The system increases transparency, allowing both students and administrators to clearly track and manage the admission process.

With a modern, user-friendly interface, it provides flexibility and easy access from anywhere. It also ensures secure handling of student data, reduces manual errors, and facilitates smooth communication between students and the school.

Ultimately, it supports smarter decision-making and a more efficient, scalable admission system.
